Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 and 24-26, drawn to a testing system including an optical system for automatically performing one or more tests to measure functionality of each laser diode sub-assembly, classified in class 250, subclass 559.4.
- II. Claims 19-23, drawn to an aligning optical testing system having means for clamping a lens into a fixed position, classified in class 250, subclass 559.29.
- III. Claims 27-36, drawn to an apparatus for securing a device under test having an extended channel and an extended positioning hole, classified in class 250, subclass 239.

The inventions are distinct, each from the other because:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, each of the inventions I, II and III has required different requirement and has separate utility thereof such as stated above. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2878

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
